

# **Computer Networks**

## **Tutorial 4:**

### **Routing**

## Scope of This Tutorial

---

- Aggregation of routing vectors
- Distance-Vector mechanism
- Shortest Path First algorithm

# Aggregation of Routing Vectors

---

| Destination  | Next Hop       |
|--------------|----------------|
| 200.8.1.0/24 | R <sub>x</sub> |
| 200.8.2.0/24 | R <sub>x</sub> |
| 200.8.3.0/24 | R <sub>x</sub> |
| ...          | ...            |

R can aggregate these vectors

| Destination  | Next Hop       |
|--------------|----------------|
| 200.8.0.0/22 | R <sub>x</sub> |
| ...          | ...            |

## Longest-Match Rule

---

If destination D matches both B1/k1 and B2/k2, with  $k1 < k2$

then the longer B2/k2 match is to be used

e.g.

| Destination  | Next Hop       |
|--------------|----------------|
| 200.8.1.0/24 | R <sub>x</sub> |
| ...          | ...            |
| 200.8.1.0/18 | R <sub>y</sub> |
| ...          | ...            |

- Such vectors are legal
- R<sub>x</sub> is chosen for packet forwarding to obtain the most specific route

## Exercise 1

---

| Destination   | Next Hop |
|---------------|----------|
| 200.0.0.0/8   | A        |
| 200.64.0.0/10 | B        |
| 200.64.0.0/12 | C        |
| 200.64.0.0/16 | D        |

Destination address of a packet

a) 200.63.1.1

b) 200.80.1.1

c) 200.72.1.1

d) 200.64.1.1

e) 200.64.2.2

f) 200.73.2.2

g) 200.88.2.2

$$64_d = 0100\ 0000_b$$

$$63_d = 0011\ 1111_b$$

$$80_d = 0101\ 0000_b$$

$$72_d = 0100\ 1000_b$$

$$73_d = 0100\ 1001_b$$

$$88_d = 0101\ 8000_b$$

What is the next hop for the packets?

## Exercise 2

---

Aggregate entries of the following tables.

| Destination    | Next Hop |
|----------------|----------|
| 200.128.1.0/24 | X        |
| 200.128.2.0/24 | X        |
| 200.128.3.0/24 | X        |
| 200.128.8.0/24 | T        |

| Destination    | Next Hop |
|----------------|----------|
| 200.128.0.0/16 | Y        |
| 200.129.0.0/16 | Y        |
| 200.130.0.0/16 | Y        |
| 200.131.0.0/16 | Y        |

| Destination           | Next Hop |
|-----------------------|----------|
| 37.149.0000 0000.0/18 | A        |
| 37.149.0100 0000.0/18 | A        |
| 37.149.1000 0000.0/18 | A        |
| 37.149.1100 0000.0/18 | B        |

Hint: Remember about longest-match rule

# Distance-Vector Mechanism

*Routing table of a router*

| Destination | Next Hop | Cost |
|-------------|----------|------|
| A           | S        | 3    |
| B           | T        | 4    |
| C           | S        | 5    |
| D           | U        | 6    |

*Message from its neighbour S*

| Destination | Cost |
|-------------|------|
| A           | 2    |
| B           | 3    |
| C           | 5    |
| D           | 4    |
| E           | 2    |

*The table after processing the message*

| Destination | Next Hop | Cost | Reason  |
|-------------|----------|------|---|
| A           | S        | 3    | No change; S probably sent this report before         |
| B           | T        | 4    | No change; R's cost via S is tied with R's cost via T |
| C           | S        | 6    | Next_hop increase                                     |
| D           | S        | 5    | Lower-cost route via S                                |
| E           | S        | 3    | New destination                                       |

## Exercise 3

---

### *Routing table of a router*

| Destination | Next Hop | Cost |
|-------------|----------|------|
| A           | R1       | 2    |
| B           | R2       | 3    |
| C           | R1       | 4    |
| D           | R3       | 5    |

### *Message from R1*

| Destination | Cost |
|-------------|------|
| A           | 1    |
| B           | 2    |
| C           | 4    |
| D           | 3    |

### *The table after processing the message*

| Destination | Next Hop | Cost |
|-------------|----------|------|
| A           | R1       |      |
| B           | R2       |      |
| C           | R1       |      |
| D           | R3       |      |

**Reason**

Link cost to R1 = 1

## Exercise 4

---

### *Routing table of a router*

| Destination | Next Hop | Cost |
|-------------|----------|------|
| A           | R1       | 5    |
| B           | R1       | 6    |
| C           | R2       | 7    |
| D           | R2       | 8    |
| E           | R3       | 9    |

### *Message from R1*

| Destination | Cost |
|-------------|------|
| A           | 4    |
| B           | 7    |
| C           | 7    |
| D           | 6    |
| E           | 8    |
| F           | 8    |

### *The table after processing the message*

| Destination | Next Hop | Cost | Reason |
|-------------|----------|------|--------|
| A           | R1       |      |        |
| B           | R1       |      |        |
| C           | R2       |      |        |
| D           | R2       |      |        |
| E           | R3       |      |        |
|             |          |      |        |

Link cost to R1 = 1

## Shortest Path First Algorithm – an Example

Forwarding table of A

| Destination | Next Hop | Cost |
|-------------|----------|------|
| B           | B        | 3    |
| C           | B        | 7    |
| D           | B        | 9    |

A builds a tree of shortest paths to all other routers

| Step | Final Set of Paths                     | Current Node | Tentative Set                                  |
|------|--|--------------|--|
| 1    | <A-B, 3><br><A-B-C, 7><br><A-B-C-D, 9> | A            | <A-B, 3> <A-C, 10> <A-D, 11>                   |
| 2    |  | B            | <A-C, 10> <A-D, 11>   <A-B-C, 7> <A-B-D, 12>   |
| 3    |  | C            | <A-C, 10> <A-D, 11> <A-B-D, 12>   <A-B-C-D, 9> |
| 4    |  |              |  |

Is it efficient to transmit all packets via those 3 links?

# Exercise 5

Find the shortest path from A to all other routers

| Step | Final Set of Paths | Current Node | Tentative Set |
|------|--------------------|--------------|---------------|
| 1    |                    | A            |               |
| 2    |                    |              |               |
| 3    |                    |              |               |
| 4    |                    |              |               |
|      |                    |              |               |
